Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role supporting Fleet Connectivity. Over the past two years, my QA automation work has focused primarily on CI/CD pipelines, test environments and build tooling. I am now looking to move into DevOps or platform engineering full time, and I am drawn to this opportunity to help build infrastructure for a new generation of connected trains.

At Odrava Health Software, I own GitLab CI pipelines supporting three product teams and approximately 25 developers. I reduced average pipeline time from 38 to 14 minutes by parallelising test jobs, caching dependencies and moving end-to-end tests to on-demand ephemeral environments. I built those environments with Docker Compose and later Helm charts on a shared Kubernetes cluster. This work has given me practical experience improving the reliability and operability of shared engineering systems used by three product teams, with pipeline changes supporting approximately 25 developers.

I also maintain a pytest and Playwright suite of approximately 900 tests, reducing the flaky-test rate from 7% to under 1%, and have developed Python and Bash tooling for PostgreSQL test-data seeding. I have also used Linux and Grafana dashboards for test metrics, strengthening my ability to troubleshoot systems and make reliability trends visible. Earlier, I configured Jenkins jobs for nightly regression runs and investigated customer issues using logs and databases. I would bring this hands-on CI/CD, test-infrastructure, automation and analytical experience to Corvale's work on a reliable and observable train-to-cloud platform, while continuing to develop across the role's broader infrastructure responsibilities.

Corvale's engineering-led approach and emphasis on end-to-end ownership make this role especially compelling to me. I would welcome the opportunity to discuss how my experience building and improving CI and test infrastructure could contribute to the Fleet Connectivity team.

Kind regards,
Marta Kowal-Brandt
