Dear Corvale Mobility Hiring Team,

I'm writing to apply for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. In my current role at Odrava Health Software, I own GitLab CI pipelines and ephemeral test environments for three teams, working with QA and product teams to make pre-merge review and end-to-end testing practical.

I designed and implemented short-lived merge-request environments on a shared Kubernetes cluster, using Helm and GitLab CI to deploy the application, PostgreSQL, and seeded data, with automated cleanup after merge or 48 hours of inactivity. I have also profiled pipelines across three teams, introducing parallel test execution, dependency caching, and a dedicated end-to-end stage. This reduced average pipeline time from 38 to 14 minutes and monthly CI runner costs by about 30%. To help teams understand and improve their systems, I collected CI results in PostgreSQL and built Grafana dashboards that helped reduce the flaky test rate from 7% to below 1% after teams addressed the leading issues.

Alongside my professional work, I built a three-node k3s homelab with applications deployed through Argo CD and provisioned a small Hetzner VPS with Terraform as a personal infrastructure-as-code project. The homelab also used Traefik ingress and cert-manager for TLS certificate management, with Prometheus, Grafana, and Loki providing monitoring. These experiences have strengthened my practical understanding of infrastructure automation and operating observable environments. I'm interested in applying that foundation to Corvale's work connecting a new train fleet with cloud services, and in contributing to an engineering-led team shaping its systems from the start. I also bring a strong communication and knowledge-sharing focus: I wrote Odrava's internal guide to how the CI system works, and the document is now used for onboarding. My cloud exposure also includes basic personal learning with AWS EC2 and S3.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience in test infrastructure, infrastructure automation, observability, and technical process improvement could contribute to Corvale's Fleet Connectivity work.

Kind regards,
Marta Kowal-Brandt
