Dear Verdane Care Hiring Team,

I am applying for the Full-Stack Engineer (TypeScript / React) – Patient Experience role. I am a Computing student at Liffey Institute of Technology with hands-on experience building accessible web applications in React and TypeScript, including a software development internship at Harbourline Media and a full-stack academic project.

At Harbourline Media, I worked on accessibility fixes for a React news site and built a keyboard- and screen-reader-friendly image gallery for article pages. I documented the component in Storybook and used Jest and React Testing Library. In my Tidewatch final-year project, I developed a React and TypeScript frontend and a Node.js and Express API, with PostgreSQL for user favourites. I tested the app with NVDA and VoiceOver and achieved a Lighthouse accessibility score of 100. My freelance Next.js project for a yoga studio also gave me experience building a user-facing wellness website with a class timetable and email-based booking requests. These experiences connect closely with your focus on accessible patient-facing features, Node.js services, PostgreSQL and automated unit testing.

I am drawn to Verdane Care's focus on putting patients first and making healthcare software straightforward and human-centered. The opportunity to build features that help people book visits and manage follow-up care is meaningful to me, and I value your emphasis on accessibility and privacy. I would be glad to bring my practical web development experience and commitment to accessible user experiences to your Patient Experience squad while continuing to grow as an engineer.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience could contribute to Verdane Care.

Yours sincerely,
Aiyana Brooks-Tan
