Dear Verdane Care team,

I'm applying for the Full-Stack Engineer role on the Patient Experience team. I'm a frontend-focused full-stack developer with 12 years of professional experience, strongest in React and TypeScript, and hands-on experience building Node.js services with NestJS and PostgreSQL. Verdane Care's focus on making healthcare interactions easier for patients and care providers particularly appeals to me.

In my current role at Älvgrind Fintech, I build customer-facing onboarding features across React and TypeScript frontends and NestJS services. I developed a BankID identity-verification flow with QR-code and same-device journeys, which improved onboarding conversion from 61% to 74% after A/B testing on 10% of traffic and rollout. I also built a secure document-upload workflow and helped migrate backend routes from Express to NestJS. This work has made me attentive to reliable handling of sensitive customer information and to building clear, dependable user journeys.

I'd bring practical experience improving accessibility and performance, including fixing onboarding issues to WCAG 2.1 AA and reducing mobile LCP from 4.1 seconds to 1.9 seconds. I also work with automated testing and Git-based delivery, including Jest, Playwright, GitHub Actions, Docker, and AWS. I build responsive web interfaces with HTML and CSS and have used Next.js for server-rendered pages. I collaborate with designers in Figma. Earlier, I led development of most of a React Native ferry-ticket app that reached around 50,000 downloads.

Verdane Care's principles of "Patients first," "Privacy by default," and "Simple beats clever" resonate with the kind of thoughtful, user-focused software I want to build. I'd welcome the opportunity to discuss how my experience could contribute to the Patient Experience team.

Thank you for your consideration,
Oskar Haddad-Lindqvist
