Dear Verdane Care Hiring Team,

I am applying for the Full-Stack Engineer (TypeScript / React) – Patient Experience role. My experience includes React and TypeScript development, accessibility improvements, automated unit testing, and project work with Node.js, alongside building a booking website and an accessible web app.

As a Software Development Intern at Harbourline Media, I worked on the company's React news site, fixed audit findings involving keyboard navigation, colour contrast, and ARIA labels across 20+ components, and built a reusable image gallery with Storybook stories. I also wrote unit tests using Jest and React Testing Library. More recently, I built a booking website for a local yoga studio with Next.js and Tailwind CSS.

My final-year project, Tidewatch, was an accessible tide and weather app for sea swimmers built with React, TypeScript, and Node.js. Together with my experience using HTML, CSS, and WCAG 2.1 accessibility practices, this gives me a relevant foundation for developing patient-facing web experiences. Verdane Care's focus on accessible patient products and its WCAG 2.2 AA commitment make the role especially relevant to my experience.

I would welcome the opportunity to discuss how my frontend, accessibility, and testing experience could contribute to the Patient Experience squad.

Sincerely,
Aiyana Brooks-Tan
