Dear Verdane Care Hiring Team,

I am applying for the Full-Stack Engineer role on the Patient Experience squad. I have built web applications professionally since 2014, and my current work combines React and TypeScript interfaces with Node.js and NestJS APIs and PostgreSQL. The opportunity to build patient-facing features across the full stack is a strong match for my experience.

At Älvgrind Fintech, I built a BankID identity-verification flow and document-upload functionality for customer onboarding. I also improved mobile page performance, fixed accessibility issues following a WCAG 2.1 AA audit, and supported an A/B-tested rollout that increased onboarding conversion from 61% to 74%. These projects have given me practical experience delivering user-facing workflows, collaborating with designers, and testing changes before wider release.

I use Jest and Playwright, and have worked with PostgreSQL, AWS, Docker, GitHub Actions and Storybook. Verdane Care's focus on accessible patient experiences and its commitment to WCAG 2.2 AA are especially relevant to the work I have done improving accessibility and performance on mobile. I would bring a broad full-stack background, along with experience supporting teammates through bootcamp mentoring and technical interviews.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience could contribute to Verdane Care's Patient Experience squad.

Kind regards,
Oskar Haddad-Lindqvist
