Corvale Mobility
Application: Cloud Infrastructure / DevOps Contractor - Fleet Connectivity

Dear Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role in Fleet Connectivity. I bring hands-on ownership of CI/CD pipelines and containerised test environments supporting 3 product teams and approximately 25 developers. With 7 years in QA automation and the last two focused mainly on pipelines, environments and build tooling, I am seeking to move into DevOps / platform engineering full time. Your scope of supporting backend developers and building infrastructure from the outset aligns with that direction.

At Odrava Health Software, I own GitLab CI pipelines covering builds, unit, integration and end-to-end tests, and artifact publishing. I reduced average pipeline time from 38 to 14 minutes through parallel test execution, dependency caching and on-demand ephemeral environments. I also built per-merge-request environments using Docker Compose and subsequently Helm charts on the company's shared Kubernetes cluster. This experience provides a practical foundation for supporting developers with repeatable environments and faster feedback.

My work also combines automation with analytical troubleshooting. I maintain approximately 900 pytest and Playwright tests and reduced their flaky test rate from 7% to under 1%. I write Bash and Python tooling for PostgreSQL test data seeding, use Linux, and have experience with Grafana dashboards for test metrics. Earlier, I investigated customer issues through logs and databases and reproduced bugs for developers. These experiences are relevant to your emphasis on observability, reliability and clear collaboration between infrastructure and backend teams.

Corvale's fleet-connectivity platform has a broader scope than my current test-infrastructure work, including telemetry ingestion, alerting and remote content updates. I would welcome a conversation about how my CI/CD ownership, environment automation and troubleshooting experience could contribute to the team as I make this transition into DevOps.

Kind regards,
Marta Kowal-Brandt
