Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role supporting fleet connectivity. At Odrava Health Software, I own GitLab CI pipelines and ephemeral environments for three teams. My background is in QA automation and test infrastructure, with practical experience making deployments repeatable, pipelines faster and failures easier to investigate. This is the experience I would bring to supporting backend developers as Corvale builds the infrastructure connecting its new trains to cloud services.

For each merge request, I built an environment containing the application, PostgreSQL and seeded data, deployed through GitLab CI and Helm to a shared Kubernetes cluster. These environments support feature review and end-to-end tests before merge, then are removed automatically. I also profiled three teams' pipelines and introduced parallel test jobs, dependency caching and a separate end-to-end stage, reducing average pipeline time from 38 to 14 minutes and monthly runner costs by approximately 30%. My internal CI documentation is used in onboarding, and I have mentored two QA interns.

Corvale's emphasis on observability and approachable infrastructure as code connects with both my work and personal projects. At Odrava, I built PostgreSQL-backed Grafana dashboards that helped teams identify flaky tests; the flaky-test rate subsequently fell from 7% to below 1%. In my personal homelab, I run a three-node k3s cluster with Argo CD, Prometheus, Grafana and Loki, alongside Traefik and cert-manager for TLS. I also use Terraform for a personal Hetzner VPS. My Terraform and AWS experience is personal rather than professional; at work, my Kubernetes responsibility is namespace-level test infrastructure, not cluster operation.

I am moving from QA infrastructure towards DevOps and platform engineering. My strongest contribution would be in deployment automation, developer support and observability, while my cloud infrastructure experience continues to develop. I would welcome a conversation about how that experience could support Corvale's fleet-connectivity team. Thank you for considering my application.

Kind regards,

Marta Kowal-Brandt
