Verdane Care
**Application: Full-Stack Engineer (TypeScript / React) - Patient Experience**

Dear Verdane Care hiring team,

Your Patient Experience role closely matches the work I do best: building customer-facing React and TypeScript features, improving accessibility and mobile performance, and delivering the Node.js services behind them. I have worked professionally in web development since 2014 and currently build onboarding features at Älvgrind Fintech. Verdane's focus on making booking and intake simpler gives that experience a clear application: helping people complete important tasks without unnecessary friction.

At Älvgrind, I built a BankID identity verification flow with QR code and same-device support, error handling and retries. After an initial A/B test with 10% of traffic, the flow was rolled out fully, increasing onboarding conversion from 61% to 74%. I also reduced mobile Largest Contentful Paint from 4.1 seconds to 1.9 seconds and implemented WCAG 2.1 AA accessibility audit fixes. These are directly relevant foundations for your focus on accessible patient journeys and performance on low-end phones.

My frontend strength is backed by practical NestJS, PostgreSQL and AWS experience. I helped migrate Express services incrementally to NestJS and built a document-upload flow using S3 presigned URLs, Lambda virus scanning and SQS. My testing toolkit includes Jest and Playwright, and I work with Docker and GitHub Actions. Integrating identity verification and handling uploaded ID documents also provides relevant experience for a product where personal information needs careful handling.

I collaborate closely with designers in Figma, have mentored at a coding bootcamp, and served as acting team lead for four months, handling 1:1s and sprint planning. I would welcome the opportunity to discuss how this combination of frontend depth, full-stack delivery and team support could contribute to Verdane's Patient Experience squad. My GitHub link is included above.

Kind regards,
Oskar Haddad-Lindqvist
