Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role on the Fleet Connectivity team. I bring hands-on experience designing and operating Azure infrastructure, building Terraform modules, and moving workloads and release processes into cloud-based environments. The opportunity to help shape a new train-to-cloud platform from architecture through production particularly interests me.

In my current contract role at Havenstad Logistics, I work in a three-person team operating an Azure estate of approximately 400 virtual machines and 12 AKS clusters across three subscriptions. I designed and developed Terraform modules for landing-zone networking, including hub-spoke VNets, Azure Firewall and private endpoints, and migrated release pipelines for 15 internal applications to Azure DevOps YAML. Earlier, I led a lift-and-shift migration of 60 VMware-hosted servers to Azure IaaS and administered Windows and Linux systems supporting municipal services.

My experience also includes networking, identity administration and practical security measures, including MFA, conditional access, backups and firewall configuration. These foundations align with the role's focus on secure, reliable and observable infrastructure, including monitoring with Azure Monitor. My experience designing landing-zone networking and leading infrastructure migrations would allow me to contribute a methodical infrastructure perspective to system-design discussions. My cloud experience is with Azure, and I hold the Microsoft Certified: Azure Administrator Associate and HashiCorp Certified: Terraform Associate certifications.

Corvale's engineering-led approach and emphasis on end-to-end ownership make this role especially compelling. I would welcome the opportunity to discuss how my experience leading the migration of 60 VMware-hosted servers to Azure IaaS, developing Terraform infrastructure modules, and modernising 15 application release pipelines could contribute to the Fleet Connectivity platform.

Kind regards,

Samuel Achterberg-Osei
