Dear Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role focused on fleet connectivity. I bring hands-on experience building Azure infrastructure, developing Terraform-based networking, and improving how internal services are deployed and operated.

At Havenstad Logistics, I built a Terraform hub-spoke network across three Azure subscriptions, including Azure Firewall, private DNS zones, private endpoints and VNet peering. I added Terratest module checks and nightly drift detection. I have also replaced manual deployments for 15 internal .NET and Node applications with Azure DevOps pipelines for App Service and AKS, increasing deployment frequency to several times per week for most applications. I operate AKS, including upgrades, node pools and ingress.

Earlier, at Maasbrug Gemeente IT Services, I planned and executed a migration of 60 servers from VMware to Azure IaaS. The cut-over took place over six weekends with no unplanned downtime. This work, together with my Windows and Linux server administration and PowerShell automation, has given me a practical foundation in cloud infrastructure, networking and reliable operations.

Corvale's work to connect a new train fleet with its cloud platform makes this role a compelling application of my infrastructure experience. I would welcome the opportunity to discuss how my Azure, Terraform and deployment automation experience could contribute to the fleet-connectivity platform.

Kind regards,

Samuel Achterberg-Osei
