Dear Verdane Care Hiring Team,

I am applying for the Full-Stack Engineer role in the Patient Experience squad. I bring 12 years of professional web application experience, with particular strength in React and TypeScript, and hands-on experience delivering features across Node.js/NestJS APIs and PostgreSQL.

At Älvgrind Fintech, I built an identity verification flow using Swedish BankID and helped raise onboarding conversion from 61% to 74% after testing the new experience with a portion of traffic. I also built a secure document upload flow and improved mobile Largest Contentful Paint from 4.1 seconds to 1.9 seconds. Alongside this work, I have fixed accessibility issues following a WCAG 2.1 AA audit, contributed to automated testing with Jest and Playwright, and worked closely with designers in Figma. These experiences align with your focus on accessible, performant patient-facing features and responsible handling of sensitive information.

I am drawn to Verdane Care's focus on making care feel simple, its patient-first and privacy-by-default principles, and the opportunity to build features patients use to book visits and manage follow-up. My background in fintech onboarding gives me relevant experience with identity verification and privacy-sensitive workflows, and I would bring a practical, end-to-end approach to your small engineering squad. I have also mentored at a coding bootcamp and served as an acting team lead, including supporting sprint planning.

Thank you for considering my application. I would welcome the opportunity to discuss how my React, TypeScript, Node.js, accessibility, and product-delivery experience could contribute to Verdane Care's Patient Experience team.

Kind regards,

Oskar Haddad-Lindqvist
