Verdane Care
Re: Full-Stack Engineer (TypeScript / React) - Patient Experience

Dear Hiring Team,

Your Patient Experience role brings together three areas represented in my work: React accessibility, booking websites and applications built with TypeScript and Node.js. I am applying with professional frontend experience, a First Class Honours degree in Computing - Software Development and practical examples relevant to Verdane Care's patient-facing features.

During my internship at Harbourline Media, I fixed accessibility issues identified in an audit across more than 20 React components, including keyboard navigation, colour contrast and ARIA labels. I also built a reusable image gallery component with Storybook stories and wrote unit tests using Jest and React Testing Library. This experience is directly relevant to your emphasis on accessible React components and automated testing. My accessibility knowledge is grounded in WCAG 2.1; your WCAG 2.2 AA standard provides a clear benchmark for the role.

In my freelance work, I built a Next.js and Tailwind CSS booking website for a yoga studio, hosted on Vercel. My final-year project, Tidewatch, was an accessible tide and weather app for sea swimmers built with React, TypeScript and Node.js. Alongside my Express and PostgreSQL skills, these projects provide a foundation for contributing beyond the frontend. The booking project also offers a practical connection to Verdane Care's appointment-booking product, without equating that work with healthcare software experience.

I would welcome the opportunity to discuss how my accessibility work, component testing and booking-site experience could contribute to your Patient Experience squad. My portfolio and GitHub links are included above. Thank you for considering my application.

Yours sincerely,
Aiyana Brooks-Tan
