Tessel Cargo Software
Routing & Tracking hiring team

Application: Backend Engineer (Python) - Shipment Tracking Platform

Dear Routing & Tracking hiring team,

Your work turning carrier events into reliable shipment tracking connects directly with my experience building fleet-telematics backends and high-throughput APIs. I am applying for the Backend Engineer (Python) role as a deliberate return to hands-on individual contributor work after leading Streamhaus's platform organisation. My aim is to build and maintain backend services, rather than take on another people-management role.

At Nordfels Telematik, I developed backends ingesting GPS data from 300k vehicles using Python, C++, PostgreSQL/PostGIS and RabbitMQ, and led development of a route-history product. That experience is particularly relevant to your event-ingestion and tracking services. At Streamhaus, I was technical lead for the Python playback API and designed and wrote most of an entitlement service handling 120k requests per second at peak, with p99 latency below 15 ms. These projects provide concrete experience to draw on when discussing API performance, data flows and reliability trade-offs.

More recently, I led a migration to approximately 60 Python 3 and Go services on GKE, with playback API availability improving from 99.5% to 99.95%. I also set up service templates incorporating FastAPI, OpenTelemetry, Prometheus and Terraform. My recent coding has primarily involved Python internal tooling and cost dashboard scripts. My cloud experience is strongest in GCP, with limited AWS exposure through EC2 and S3. Alongside that infrastructure background, I bring automated-testing experience from a long-lived Python test harness and maintenance of a Python library using pytest and tox.

Tessel's short design notes, dedicated reliability work and ownership of services align with my experience introducing RFCs, architecture reviews and on-call guidelines. The opportunity to apply that background within your seven-engineer Routing & Tracking team is a strong fit for the hands-on work I am seeking. I would welcome a conversation about the fleet-ingestion or entitlement-service projects and how their engineering lessons could support Tessel Track.

With best regards,
Rafael Moretti-Klein
