Corvale Mobility
Application: Cloud Infrastructure / DevOps Contractor – Fleet Connectivity

Dear Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role in your Fleet Connectivity team. My experience combines Azure infrastructure design and operation, Terraform and automated application delivery: capabilities relevant to taking your new train-to-cloud platform from architecture to production. At Havenstad Logistics, I have built landing zone networking across three Azure subscriptions and replaced manual deployments for 15 internal applications with Azure DevOps pipelines.

The landing zone work included hub-spoke networking, Azure Firewall, private DNS zones and private endpoints for storage and SQL. I added Terratest module tests in the pipeline and nightly drift detection, providing automated checks around infrastructure changes. Azure is my hands-on cloud platform, matching your acceptance of other major clouds alongside AWS. This experience provides a practical foundation for contributing to your network design, infrastructure-as-code repository and secure connectivity work.

For application delivery, my YAML pipelines cover build, test and deployment to App Service or AKS, using Docker and Helm. Deployment frequency increased from roughly monthly to several times per week for most applications. I also operate AKS upgrades, node pools and ingress, while developers own application manifests. This division of responsibilities is relevant to your requirement to support backend developers in deploying services that are straightforward to run. Earlier, I led a 60-server VMware-to-Azure migration completed over six weekends without unplanned downtime, alongside administering approximately 250 Windows and Linux servers.

Corvale's scope brings together infrastructure design, application delivery and operational reliability, all areas represented in my work. I would welcome a discussion about how my Azure, Terraform and systems administration experience could contribute to the cloud infrastructure behind your new fleet. Thank you for considering my application.

Kind regards,
Samuel Achterberg-Osei
