Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor role. In my current role at Odrava Health Software, I own GitLab CI pipelines for three product teams and have built short-lived test environments using Docker Compose and Helm on a shared Kubernetes cluster. This has given me hands-on experience with CI/CD automation, Kubernetes-based test environments, GitOps, observability, and infrastructure tooling.

I analysed pipeline performance across three teams and reduced average pipeline time from 38 to 14 minutes and monthly CI runner costs by about 30% by parallelising test jobs, caching dependencies and separating end-to-end tests into their own stage. I also built merge-request environments with the application, PostgreSQL and seeded data, automatically cleaned up after merge or 48 hours of inactivity. These environments let QA and product teams review changes before merge and run end-to-end tests against them.

Alongside my professional work, I built a three-node k3s homelab with applications deployed through Argo CD. For the homelab, I also configured Prometheus, Grafana and Loki for monitoring, Traefik ingress, and cert-manager for TLS. I also provisioned infrastructure for a small Hetzner VPS using Terraform in a personal account. I have also used Linux throughout these projects and explored AWS EC2 and S3 at a basic, personal-learning level. I'm currently preparing for the Certified Kubernetes Administrator exam. My Terraform experience is personal-project based, and my Kubernetes work at Odrava is at the namespace and Helm-chart level on a cluster operated by the platform team. I also wrote the internal CI guide used in onboarding and mentored two QA interns, helping teams understand and adopt the automation and environment workflows.

Corvale's work connecting a new train fleet with cloud services is an opportunity to apply my experience in repeatable automation, short-lived environments, monitoring and clear technical documentation while continuing my transition into infrastructure engineering. I recognise that my Terraform experience is currently personal-project based and that my Kubernetes work has been at namespace and Helm-chart level; I would bring a practical automation background and a clear understanding of those boundaries to the engagement. I would welcome the chance to discuss how my background could contribute to the team.

Thank you for your time.

Marta Kowal-Brandt
