Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I'm a QA automation engineer with seven years of experience, including more than two years owning CI/CD pipelines and building test infrastructure for three product teams. I'm transitioning from QA automation into DevOps and platform engineering, with hands-on experience in CI/CD, Kubernetes-based test infrastructure and infrastructure automation. The opportunity to help shape infrastructure for Corvale's fleet connectivity work particularly interests me.

At Odrava Health, I own GitLab CI pipelines used by around 25 developers. By parallelising test jobs, caching dependencies and separating end-to-end execution, I reduced average pipeline time from 38 to 14 minutes and monthly runner costs by about 30%. I designed and built short-lived application and PostgreSQL environments using Helm on a shared Kubernetes cluster, with GitLab CI handling deployment and automatic cleanup. These environments let teams review features before merge and run end-to-end tests in isolation. This work has given me practical experience improving the reliability and operability of systems used across teams, as well as writing documentation that supports onboarding. I also documented the CI workflow for onboarding and mentored two QA interns, helping make technical practices easier for others to adopt.

I have also built a personal k3s homelab with applications deployed through Argo CD, monitoring with Prometheus, Grafana and Loki, and infrastructure for a Hetzner VPS provisioned with Terraform. In my personal k3s environment, I configured Prometheus, Grafana and Loki for monitoring, with Traefik ingress and cert-manager for TLS. My Terraform experience is hands-on but personal-project based; at Odrava, I work at namespace level on a shared cluster rather than administering the cluster itself. I also have basic AWS learning experience with EC2 and S3 through the free tier, alongside hands-on Linux experience. I would bring this practical infrastructure, CI/CD and observability experience, together with a reliability-focused QA perspective and clear technical communication, to Corvale's engineering-led team.

Thank you for considering my application. I'd welcome the opportunity to discuss how my experience in CI/CD and test infrastructure could contribute to the fleet connectivity platform.

Marta Kowal-Brandt
