Hello Corvale Mobility team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I'm a QA automation engineer looking to move into infrastructure engineering full time, and your work connecting a new train fleet to cloud services is an opportunity to apply the CI/CD and infrastructure experience I've built across three product teams.

At Odrava Health Software, I own GitLab CI pipelines for approximately 25 developers. By parallelising test jobs, caching dependencies and separating end-to-end tests, I reduced average pipeline time from 38 to 14 minutes and monthly runner costs by approximately 30%. I also built short-lived merge-request environments with Docker Compose and later Helm on a shared Kubernetes cluster. These give teams an environment to review changes and run tests before merging; the platform team operates the cluster.

Alongside this work, I built a personal k3s cluster using Argo CD for GitOps, Prometheus, Grafana and Loki for monitoring, and cert-manager for TLS. I also used Terraform to provision a personal Hetzner VPS and am learning the basics of AWS EC2 and S3. I've written CI documentation used for onboarding and built Grafana dashboards that helped teams identify flaky tests and reduce their rate from 7% to below 1%.

What appeals to me about this role is the chance to help shape infrastructure that is secure, observable and practical for developers to operate. I would welcome the opportunity to discuss how my experience in test infrastructure and my personal projects could contribute to Corvale's fleet connectivity team.

Thank you for your time and consideration.
