Dear Aurelis Cloud Hiring Team,

I am applying for the Site Reliability Engineer – Early Talent Programme. I graduated from Liffey Institute of Technology in 2025 with First Class Honours in Computing (Software Development), and I have practical experience building and testing web applications. I am interested in developing my skills in reliability and infrastructure while contributing to the team's operational work.

For my final-year project, Tidewatch, I built an accessible React and TypeScript application with a Node.js/Express API that cached data from public weather and tide APIs, and a PostgreSQL database for user favourites. I tested the app with Jest, NVDA and VoiceOver, and achieved a Lighthouse accessibility score of 100. This project gave me practical experience integrating APIs, testing changes and working across application components.

During my internship at Harbourline Media, I worked with the web team on its React news site. I fixed accessibility issues across more than 20 components, built a reusable image gallery, documented it with Storybook stories, and wrote unit tests using Jest and React Testing Library. I also use Git and have supported first-year students in web development labs. I would bring this practical, careful approach to completing tickets, testing changes and documenting my work as I learn Aurelis Cloud's tools and standards.

The programme's mentoring and exposure to production systems appeal to me as a way to broaden my experience beyond web applications and learn how reliable infrastructure is operated. Thank you for considering my application. I would welcome the opportunity to discuss how my experience and learning mindset could contribute to the team.

Yours sincerely,

Aiyana Brooks-Tan
