Dear Verdane Care hiring team,

I am a Computing graduate and frontend developer applying for the Full-Stack Engineer – Patient Experience role. Verdane Care's Patients first and Privacy by default principles, together with its focus on accessible, easy-to-use patient software, particularly appeal to me. I first became interested in accessibility when a friend who uses a screen reader showed me how difficult many websites are for her to use.

During my internship at Harbourline Media, I fixed accessibility issues across more than 20 React components and built a keyboard- and screen-reader-friendly image gallery. I documented the gallery with Storybook stories, used Git/GitHub, and wrote unit tests with Jest and React Testing Library.

For my final-year project, Tidewatch, I built an accessible React and TypeScript app with a Node.js/Express API that cached data from public weather and tide APIs, using PostgreSQL for user favourites. I tested it with NVDA and VoiceOver, and it achieved a Lighthouse accessibility score of 100. I have also built a freelance wellness booking website for a yoga studio using Next.js and Tailwind CSS. You can see more of my work at aiyana-bt.example.com.

I am a native English speaker.

I would welcome the opportunity to discuss how my React and TypeScript frontend experience, accessibility work, automated unit testing, and project-based Node.js and PostgreSQL experience could contribute to Verdane Care's Patient Experience squad. I am also keen to learn and apply Verdane Care's GDPR, data-minimisation, and other health-data privacy requirements. Thank you for considering my application.

Yours sincerely,
Aiyana Brooks-Tan
