Dear Quillstone Payments Hiring Team,

I am applying for the Machine Learning Engineer – Customer Support AI role. My experience developing and operating NLP systems for Croatian administrative and customer-support text aligns closely with your team's work on models that route tickets and help support agents.

At Slavonica Document AI, I built and deployed a document classifier covering 23 classes, achieving 94% accuracy and a macro F1 of 0.91. The FastAPI service runs in Docker on Azure App Service and processes approximately 15,000 documents per day. I have also developed a Croatian named entity recognition model and implemented weekly monitoring reports. When monitoring revealed an OCR change that had reduced model accuracy by nine percentage points, the issue was addressed within a week. This work has given me practical experience with model serving, monitoring, Azure, Python, and MLflow.

Earlier, at Baranjska kreditna banka, I worked on customer churn prediction and complaint classification, including a classifier for 11 complaint topics used in weekly reporting to customer service management. I have also built a personal weekend prototype for question answering over Croatian laws using retrieval-augmented generation. My RAG experience is at the prototype stage; my production experience is in classification, NER, serving, and monitoring. I am currently pursuing doctoral research on named entity recognition in Croatian legal texts, expected to conclude in 2027.

I am drawn to the opportunity to build practical AI systems for customer operations and to Quillstone's emphasis on ownership, teamwork, and learning from mistakes. I would welcome the opportunity to discuss how my experience in NLP and production document AI could contribute to your team.

Kind regards,
Petra Zlatarić-Novosel
