Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. The opportunity to shape cloud infrastructure for a new train fleet—from network design and infrastructure as code through to reliable production operations—closely matches the work I have been doing in Azure infrastructure and DevOps.

In my current contract at Havenstad Logistics, I design and maintain Azure landing-zone networking with Terraform, including hub-and-spoke networks, Azure Firewall, private DNS zones, private endpoints and peering across three subscriptions. I have also added Terratest module tests and nightly drift detection, and replaced manual deployments for 15 internal applications with Azure DevOps pipelines. This increased deployment frequency from roughly monthly to several times a week for most applications. I also operate AKS clusters, including upgrades, node-pool management and ingress configuration.

Earlier, as a systems administrator, I supported approximately 250 Windows and Linux servers and led the planning and execution of a 60-server VMware-to-Azure migration. We completed the cutover over six weekends without unplanned downtime. My experience with Azure networking, site-to-site VPNs, private endpoints, PowerShell automation and Microsoft 365 security baselines has given me a practical foundation in infrastructure reliability and security. I hold the Microsoft Certified: Azure Administrator Associate and Terraform Associate certifications.

Corvale's engineering-led approach and the chance to help build and operate the infrastructure connecting train systems with cloud services are especially compelling. I would welcome the opportunity to discuss how my hands-on experience with cloud infrastructure, Terraform and deployment pipelines could contribute to the Fleet Connectivity team.

Kind regards,
Samuel Achterberg-Osei
