Dear Verdane Care team,

I'm applying for the Full-Stack Engineer role on the Patient Experience team. I have 12 years of professional web development experience, with React and TypeScript as my strongest areas, alongside hands-on experience building Node.js services and SQL-backed applications. Verdane Care's focus on accessible, straightforward patient experiences resonates with me.

At Älvgrind Fintech, I build onboarding features with React, TypeScript, NestJS and PostgreSQL. I developed a BankID identity-verification flow with QR and same-device authentication, error handling, and retries; onboarding conversion increased from 61% to 74%, and improved mobile Largest Contentful Paint from 4.1 seconds to 1.9 seconds. I've also fixed accessibility issues following a WCAG 2.1 AA audit and write automated unit and end-to-end tests with Jest and Playwright. These projects have taught me to pay close attention to the experience on mobile and to the reliability of the services behind it.

I also work closely with designers in Figma, contribute to sprint planning, and use GitHub Actions for delivery workflows. I've helped migrate backend routes from Express to NestJS. I also built a secure document-upload flow using S3 presigned URLs, Lambda-based ClamAV scanning, SQS, and PostgreSQL status tracking—experience that shaped my approach to handling sensitive customer data. I'd be glad to bring that experience to Verdane Care's small squad and help build accessible, performant patient-facing features while applying the careful handling of sensitive data I have used in fintech onboarding. My broader experience includes Next.js for server-rendered marketing pages, AWS, Docker, Storybook, and A/B testing. I'm interested in learning the specific privacy requirements of health data and contributing to a product guided by "Patients first" and "Privacy by default."

Thank you for considering my application. I'd welcome the opportunity to discuss how my experience could contribute to the Patient Experience team.

Best regards,
Oskar Haddad-Lindqvist
