Dear Verdane Care team,

I'm applying for the Full-Stack Engineer role on your Patient Experience team. I have 12 years of professional web development experience, with my strongest skills in frontend engineering. Verdane's focus on simple, accessible patient-facing software is a strong match for the kind of work I do: building customer-facing features and improving the experience for the people using them.

At Älvgrind Fintech, I work in a six-person onboarding team using React, TypeScript, NestJS and PostgreSQL. I built a BankID verification flow that was A/B tested before rollout; onboarding conversion increased from 61% to 74%. I also built a document upload flow using S3 presigned URLs and virus scanning in AWS Lambda. This work has given me experience building features that handle sensitive customer information.

I've addressed WCAG 2.1 AA accessibility audit findings and improved mobile Largest Contentful Paint from 4.1 to 1.9 seconds through code splitting, image optimisation and dependency changes. I've worked with designers in Figma and have experience with Jest, Playwright and Git-based workflows. I've also mentored at a coding bootcamp and served as acting team lead for four months, conducting 1:1s and sprint planning.

I'd welcome the opportunity to bring my full-stack experience and frontend focus to Verdane's Patient Experience squad. Thank you for considering my application; I'd be happy to discuss how I could contribute.

Best regards,
Oskar Haddad-Lindqvist
