Dear Verdane Care Hiring Team,

I'm applying for the Full-Stack Engineer role on the Patient Experience team. I have built web applications professionally since 2014, and in my current role I develop customer-facing features end to end with React, TypeScript, Node.js and PostgreSQL. Verdane Care's focus on making healthcare feel human, with patient-facing booking and follow-up experiences, makes this role a compelling fit for my experience.

At Älvgrind Fintech, I work on KYC onboarding and built a BankID identity-verification flow with QR-code handling, error states and retries. We tested it with 10% of traffic before rollout, and onboarding conversion increased from 61% to 74%. I have also built document-upload functionality using S3 presigned URLs, Lambda-based virus scanning and SQS, and helped migrate Express services to NestJS. These projects have strengthened my experience delivering reliable full-stack features in KYC onboarding, identity verification and document handling.

I also bring hands-on experience improving accessibility and performance. I fixed onboarding issues against WCAG 2.1 AA and reduced mobile LCP from 4.1 seconds to 1.9 seconds. I work with automated tests including Jest and Playwright, use GitHub Actions and Git-based delivery workflows, and collaborate closely with designers in Figma. I work with designers in Figma and contribute to accessible, user-facing interfaces using React, HTML and CSS, alongside automated unit and end-to-end tests with Jest and Playwright. Earlier, I co-developed a React Native ticket-purchasing app and served as its project tech lead; I have also mentored at a coding bootcamp.

I am fluent in English and have basic, school-level German.

I would welcome the opportunity to apply my experience with identity verification, sensitive document uploads, accessibility, and reliable end-to-end web features to Verdane Care's patient experience products. Thank you for considering my application. I look forward to discussing how I could contribute to the team.

Kind regards,
Oskar Haddad-Lindqvist
