Dear Hiring Manager,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role at Corvale Mobility. As a Senior Platform Engineer and technical lead for a platform team, I would bring platform engineering experience, technical leadership of a platform team, and experience mentoring three backend engineers into SRE roles to a team shaping reliable train-to-cloud infrastructure.

In my current role, I lead technical work for the platform team and have mentored three backend engineers transitioning into SRE roles. I also evaluated Istio and Linkerd as service-mesh options in 2023; neither was adopted or operated in production. This experience is relevant to Corvale's emphasis on challenging design decisions with evidence and helping backend engineers adopt reliability-focused practices.

Corvale's focus on observability and collaboration across engineering teams is particularly relevant to my background. In 2024, I spoke at a UK DevOps meetup on "SLOs that product managers care about," demonstrating my ability to communicate service-reliability concepts in a product context.

I would welcome the opportunity to discuss how my platform experience could contribute to the fleet connectivity team. Thank you for your consideration.

Yours sincerely,
Nadia
