Tobias Mwangi-Hartley

Data Scientist | Data Engineering & Analytics

Edinburgh, UK | tobias.mwangihartley@example.com | +44 7700 900110 | linkedin.com/in/tmh-example

PROFILE

Data scientist with 6 years' experience in analytics and data science, including 4+ years as a data scientist. Experienced in building analytical workflows with Python, SQL, BigQuery and dbt, and translating business needs into reliable data products. Developed scheduled forecasting and batch-scoring workflows, and contributed to a Dockerised experiment-planning application hosted on Cloud Run. Strong statistical foundation and keen to develop further in data engineering and platform work.

KEY SKILLS

Python: pandas, scikit-learn, LightGBM, XGBoost, statsmodels, Streamlit, pytest
SQL: BigQuery, batch scoring, query-based analytics
Data workflows: dbt, scheduled notebook jobs, BigQuery, Vertex AI Workbench
Engineering tools: Git, Docker, Jupyter
Analytics: data modelling, A/B testing, causal inference, time-series forecasting, Bayesian statistics
Visualisation and reporting: Looker, R Markdown

EXPERIENCE

Data Scientist | Thistlebox (meal-kit subscriptions), Edinburgh *Feb 2022–Present*

- Build and analyse approximately 40 A/B tests per year for growth and product teams; created a sequential testing calculator used by around 25 colleagues.
- Developed a weekly, six-week-ahead demand forecasting workflow by recipe and region using LightGBM and calendar, price and menu-position features. The scheduled Vertex AI Workbench notebook writes forecasts to BigQuery for operations reporting in Looker.
- Improved forecast WAPE from 23% to 14%; the work was associated with an estimated 9% reduction in food waste.
- Developed an XGBoost churn propensity model, scored weekly in BigQuery, to target retention offers to top-decile customers. A 10% holdout validation found churn was 2.1 percentage points lower in the treated group.
- Write production SQL in BigQuery and maintain dbt models for the analytics layer.
- Since 2025, written pytest unit tests for forecasting feature code, reaching approximately 60% coverage.
- Built a Streamlit application for planning and analysing sequential experiments and wrote its Dockerfile; the data platform team handles deployment to Cloud Run.
- Present results to leadership monthly and have delivered internal "Stats for PMs" training three times.

Junior Data Analyst | Firth Energy Retail, Glasgow *Sep 2020–Jan 2022*

- Performed customer segmentation and tariff analysis using R and SQL.
- Automated monthly regulator reports with R Markdown, saving the team approximately two days each month.

SELECTED PROJECT

Image Classification | Personal learning project, 2025

- Fine-tuned a small CNN in PyTorch on a public food-images dataset as part of an online deep learning course, achieving approximately 80% accuracy.
- Tools: PyTorch, torchvision, Google Colab.

EDUCATION

MSc Statistics, University of the Lothians | 2020 | Distinction

Dissertation: Bayesian hierarchical models for small-area energy demand

BSc Mathematics, University of the Lothians | 2019

LANGUAGES

English (native) | Swahili (conversational)
