Dear Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. Over seven years in QA automation, I've focused increasingly on infrastructure that helps teams build, test and release reliably.

At Odrava Health Software, I own GitLab CI pipelines for three product teams. I've improved pipeline duration from 38 to 14 minutes, reducing monthly CI runner costs by about 30%. I design and build short-lived Kubernetes merge-request environments comprising the application, PostgreSQL, seeded data, automated deployment, and cleanup after merge or 48 hours of inactivity.

Alongside my work, I built a three-node k3s homelab with GitOps deployments through Argo CD, Prometheus, Grafana and Loki monitoring, and Traefik ingress with cert-manager-managed TLS certificates. I also provisioned a small Hetzner VPS with Terraform.

I also wrote the internal 'How Our CI Works' guide used in onboarding. My CI tooling and shared test environments help QA and product teams review changes before merge.

Corvale's plans to connect a new train fleet to its cloud platform make this an especially interesting infrastructure challenge. I could contribute my experience with CI/CD pipelines, Linux, Kubernetes-based environments, Terraform in a personal Hetzner project, basic AWS EC2/S3 learning, observability, and delivery reliability.

Thank you for your time and consideration.

Marta Kowal-Brandt
