NADIA BRENNAN-AZIZ

Senior Cloud Infrastructure / Platform Engineer

Manchester, United Kingdom | nadia.brennanaziz@example.com | +44 7700 900909

PROFESSIONAL SUMMARY

Cloud infrastructure and platform engineer with 10 years in infrastructure engineering, including six years running Kubernetes platforms on AWS, and experience with platform system design. Strong hands-on experience with Terraform and AWS, with a track record of leading platform initiatives, designing self-service infrastructure, and taking platform improvements into production, including a Karpenter migration that reduced EC2 spend by 38%, while building reliable, observable platforms that help engineering teams deliver services safely and efficiently.

LANGUAGES

English (native) | Urdu (conversational)

TECHNICAL TOOLKIT

Cloud infrastructure design and operation: AWS (EKS, EC2, VPC, IAM, RDS, S3, SQS, Route 53, CloudFront), Kubernetes, Linux
Infrastructure as code: Terraform, Atlantis, Crossplane, Puppet
Platform engineering: Argo CD, Helm, Kustomize, Karpenter, GitHub Actions
Reliability and observability: Prometheus, Grafana, Loki, Alertmanager, OpenTelemetry, SLOs and error budgets, incident management
Programming and testing: Go, Python, Bash, k6

EXPERIENCE

Senior Platform Engineer | Tallybrook Ltd (B2B accounting SaaS)
Manchester, United Kingdom / remote | Apr 2022 – Present

- Technical lead for a five-person platform team, operating and improving an AWS EKS platform across eight clusters and three regions, supporting approximately 350 services. Participate in the incident commander rotation and established the incident and post-mortem process.
- Designed and built an internal developer platform and self-service cloud infrastructure with Go and Python service templates, Argo CD GitOps, and Crossplane self-service for RDS, SQS and S3. Adopted by all 14 product teams; reduced new-service time to production from approximately two weeks to under one day.
- Led an SLO programme for the 20 most critical services, agreeing error-budget policy with product leadership and introducing burn-rate alerts; reduced on-call pages per week by approximately 60%.
- Migrated node provisioning from managed node groups and Cluster Autoscaler to Karpenter, using Spot instances for stateless workloads with interruption handling. Reduced EC2 spend by 38% (approximately £410,000 per year).

Site Reliability Engineer | Brightwater Games
Leeds | Jan 2019 – Mar 2022

- Operated AWS game-backend infrastructure using EC2, ECS and later EKS for titles with up to 1.2 million daily active players.
- Managed AWS infrastructure as code with approximately 40 Terraform modules and Atlantis plan/apply workflows on pull requests.
- Replaced a noisy Nagios setup with a Prometheus, Grafana, Alertmanager and Loki observability stack.

- Used k6 load tests and capacity planning to prepare launches, including simulations of 300,000 concurrent players; identified a connection-pool limit before launch and enabled it to be addressed before release.

SELECTED PROJECT

Kubernetes cleanup operator | Open source side project *2024*

- Built a Go Kubernetes controller with controller-runtime to delete expired preview namespaces; the project has approximately 120 GitHub stars.

LEADERSHIP & KNOWLEDGE SHARING

- Spoke at a UK DevOps meetup in 2024 on "SLOs that product managers care about".
- Mentored three engineers transitioning from backend development into SRE.

EDUCATION & TRAINING

BSc Computer Science | University of the North Moors *2016*

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) | 2021; renewed 2024
AWS Certified Solutions Architect – Professional | 2023
