NADIA BRENNAN-AZIZ

Cloud Infrastructure / Platform Engineer

Manchester, United Kingdom | nadia.brennanaziz@example.com | +44 7700 900909

PROFESSIONAL SUMMARY

Senior platform and site reliability engineer with 10 years of infrastructure experience, including six years operating Kubernetes platforms on AWS. Designs and operates AWS cloud infrastructure, maintains infrastructure as code with Terraform, and leads cross-functional technical work with platform and product teams to shape reliable, observable systems and self-service paths; reduced EC2 spend by 38% (approximately £410,000 per year).

LANGUAGES

English (native) | Urdu (conversational)

TECHNICAL TOOLKIT

Cloud infrastructure design and operations: AWS (EKS, EC2, VPC, IAM, RDS, S3, SQS, Route 53, CloudFront), Kubernetes, Linux
Infrastructure as code and automation: Terraform, Atlantis, Crossplane, Puppet, GitHub Actions, Go, Python, Bash
Platform and delivery: Argo CD, Helm, Kustomize, Karpenter, service templates, GitOps
Reliability and observability: Prometheus, Grafana, Loki, Alertmanager, OpenTelemetry, SLOs and error budgets, incident management, k6

PROFESSIONAL EXPERIENCE

Senior Platform Engineer | Tallybrook Ltd *Apr 2022 – Present*

Manchester / remote

- Technical lead for a five-person platform team; design and operate AWS cloud infrastructure for an EKS platform spanning eight clusters, approximately 350 services, and three regions.
- Designed and built an internal developer platform adopted by all 14 product teams, using Go and Python service templates, Argo CD GitOps, and Crossplane self-service for RDS, SQS, and S3; reduced the time to take a new service to production from approximately two weeks to under one day.
- Introduced SLOs, burn-rate alerts and error-budget policies for the 20 most critical services, agreeing the policy with product leadership; reduced on-call pages by approximately 60%.
- Migrated node provisioning to Karpenter and used spot instances for stateless workloads, reducing EC2 spend by 38% (approximately £410,000 per year); participate in the incident commander rotation and established the incident and post-mortem process.

Site Reliability Engineer | Brightwater Games *Jan 2019 – Mar 2022*

Leeds

- Operated AWS game-backend infrastructure (EC2, ECS and later EKS) for titles with up to 1.2 million daily active players.
- Managed AWS infrastructure as code using Terraform across approximately 40 modules, with Atlantis plan/apply workflows on pull requests.
- Replaced a noisy Nagios setup with Prometheus, Grafana, Alertmanager and Loki for monitoring and alerting.
- Ran k6 load tests and led launch capacity planning; a test simulating 300,000 concurrent players identified a connection-pool limit that was fixed before launch.

SELECTED TECHNICAL PROJECT

Kubernetes cleanup controller | Open-source side project *2024*

- Built a small Go controller using controller-runtime to delete expired preview namespaces; the project has approximately 120 GitHub stars.

TECHNICAL LEADERSHIP

- Mentored three engineers transitioning from backend development into SRE; presented “SLOs that product managers care about” at a UK DevOps meetup in 2024.

EDUCATION & TRAINING

BSc Computer Science | University of the North Moors | 2016

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) | 2021; renewed 2024
AWS Certified Solutions Architect – Professional | 2023
