Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I'm a QA automation engineer with seven years of experience, including the last two focused primarily on CI/CD pipelines, Kubernetes-based test environments, build tooling and internal infrastructure automation. I'm now looking to move into DevOps and platform engineering full time, and the opportunity to help shape infrastructure for Corvale's new train fleet is a compelling next step.

At Odrava Health, I own GitLab CI pipelines used by three product teams, covering builds, tests and artifact publishing. By profiling the pipelines, parallelising jobs, adding dependency caching and separating end-to-end tests into their own stage, I reduced average pipeline time from 38 to 14 minutes and monthly runner costs by about 30%. I also built short-lived merge-request environments using Docker Compose and Helm on a shared Kubernetes cluster, and wrote internal CI documentation now used in onboarding. I also documented the CI workflow for onboarding and built merge-request environments that enabled QA and product teams to review features and run end-to-end tests before merge. This work has taught me to make infrastructure workflows practical for the teams that depend on them and to communicate changes clearly.

I've also built a personal three-node k3s cluster, deploying applications through Argo CD and setting up Prometheus, Grafana, Loki, Traefik and cert-manager. In a personal project, I used Terraform to provision infrastructure for a small Hetzner VPS, and have explored AWS through basic EC2 and S3 learning. My Kubernetes work at Odrava is at namespace level on a shared cluster, where I create Helm deployments for test environments. I would bring this hands-on experience, careful analytical approach, and focus on observable, reliable delivery workflows to Corvale's Fleet Connectivity team.

Corvale's engineering-led approach and emphasis on teams owning their systems end to end appeal to me. I'd welcome the opportunity to discuss how my experience improving delivery infrastructure and building test environments could contribute to the Fleet Connectivity team.

Thank you for your time and consideration.

Marta Kowal-Brandt
