Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor role. The opportunity to help shape and operationalise infrastructure for Corvale's new train fleet closely matches the direction of my work: building and improving the CI/CD, test environments and infrastructure that product teams rely on.

At Odrava Health, I build and operate CI/CD and test infrastructure used by three product teams. I have built short-lived merge-request environments using Docker Compose and, later, Helm on a shared Kubernetes cluster. By profiling and restructuring pipelines, I reduced their average runtime from 38 to 14 minutes and monthly CI runner costs by about 30%. I also maintain a roughly 900-test pytest and Playwright suite and built a Python and PostgreSQL workflow with Grafana dashboards to help teams find and address flaky tests. I worked across QA, product and development teams to make these systems more reliable and easier to use, and enabled QA and product colleagues to review changes in isolated environments before merge.

At work, my Kubernetes access is at namespace level, and I write Helm charts for test environments. I've also built a personal three-node k3s homelab, deploying applications from Git with Argo CD and setting up Prometheus, Grafana and Loki for monitoring. The project also involved Linux-based systems, GitOps deployment, and monitoring with Prometheus, Grafana and Loki. In a personal infrastructure project, I provisioned a small Hetzner VPS with Terraform; I have also developed basic hands-on familiarity with AWS EC2 and S3 through personal learning. I wrote the internal guide to our CI workflows, which is used in team onboarding, and mentored two QA interns.

Corvale's engineering-led approach and end-to-end ownership are appealing to me. I would welcome the opportunity to bring my experience in test infrastructure, automation and observability to the Fleet Connectivity team as I continue developing toward platform and cloud infrastructure engineering and apply my strengths in automation, observability, and analytical problem-solving. Thank you for your consideration.

Marta Kowal-Brandt
