Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. My experience building CI/CD workflows and short-lived Kubernetes environments has given me a practical foundation in making software deployments repeatable, testable and easier for development teams to operate.

At Odrava Health Software, I own GitLab CI pipelines for three product teams and built merge-request environments using Helm on a shared Kubernetes cluster. By parallelising tests, adding dependency caching and restructuring pipeline stages, I reduced average pipeline time from 38 to 14 minutes and monthly CI runner costs by about 30%. I have also built Grafana dashboards that helped teams identify flaky tests, and written internal CI documentation used in onboarding.

The opportunity to help shape infrastructure for Corvale's new train fleet is particularly interesting to me because the role combines reliable service delivery with the challenge of connecting onboard systems and backend services. Outside work, I run a three-node k3s homelab with GitOps, monitoring and TLS tooling, and have used Terraform to provision infrastructure for a small Hetzner VPS.

To be clear about the scope of my current experience, my Terraform work has been in a personal environment; my AWS exposure is limited to learning EC2 and S3 basics, and I have not used Terragrunt. My professional Kubernetes work is focused on namespace-level access and Helm deployments to a cluster operated by a platform team. I would bring strong delivery and test-infrastructure experience, analytical problem-solving and clear documentation while continuing to develop my infrastructure engineering expertise.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience could contribute to Corvale's fleet connectivity platform.

Marta Kowal-Brandt
