Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. My experience owning CI/CD and test infrastructure for three product teams, alongside hands-on work with Kubernetes, Helm and observability, aligns with the operational foundations needed as Corvale prepares its new train fleet.

At Odrava Health Software, I own GitLab CI pipelines serving approximately 25 developers. I built merge-request environments deployed through Helm to a shared Kubernetes cluster, with seeded PostgreSQL data, end-to-end testing and automatic cleanup. I also reduced average pipeline time from 38 to 14 minutes and monthly CI runner costs by about 30%. These projects have given me practical experience making development environments repeatable and easier for teams to use. I documented how our CI works for onboarding, and QA and product teams use the ephemeral environments to review features before merge.

I have also built a personal three-node k3s homelab using GitOps with Argo CD, and set up Prometheus, Grafana, Loki, Traefik and cert-manager. My Terraform work so far is personal: I used it to provision infrastructure for a small Hetzner VPS. My AWS exposure is also personal learning, covering EC2 and S3 basics, rather than work experience. I am currently studying for the CKA; the exam is scheduled for January 2027.

Corvale's work connecting a new train fleet with cloud services is a compelling application of reliable, observable infrastructure. I would welcome the opportunity to discuss how my CI/CD, Kubernetes-environment and automation experience could contribute to the Fleet Connectivity team.

Kind regards, Marta Kowal-Brandt
