Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. My experience centers on building and improving CI/CD workflows and Kubernetes-based environments that help product teams test and review software reliably. At Odrava Health Software, I own GitLab CI pipelines and ephemeral test environments used by three teams of approximately 25 developers.

I have built merge-request environments deployed with Helm to a shared Kubernetes cluster, with automated cleanup and e2e tests running against each environment. I also reduced average pipeline time from 38 to 14 minutes and monthly CI runner cost by about 30% by profiling and parallelising jobs, adding dependency caching and reorganising test stages. This work has involved making infrastructure workflows practical for developers, and I documented how the CI system works for team onboarding.

I am also developing hands-on infrastructure skills outside my current role. In my personal homelab, I run a three-node k3s cluster with GitOps deployment through Argo CD, Prometheus, Grafana and Loki. I used Terraform to provision infrastructure for a small Hetzner VPS and have learned AWS EC2 and S3 fundamentals. My cloud experience is personal rather than production AWS experience, and my Kubernetes work at Odrava is at namespace level on a cluster operated by the platform team.

Corvale's new train fleet and the goal of taking its vehicle-to-cloud infrastructure from architecture through production make this a compelling opportunity to apply my platform and automation experience to a new domain. I would welcome the opportunity to discuss how my background in CI/CD, Kubernetes environments and operational tooling could support the Fleet Connectivity team.

Kind regards,

Marta Kowal-Brandt
