Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor role. The opportunity to help shape infrastructure connecting train systems with cloud services is a compelling next step for me as I move from QA automation into DevOps and platform engineering. My experience centers on building and improving CI/CD systems, Kubernetes-based test environments, and observability tooling that help engineering teams deliver and validate software reliably.

At Odrava Health Software, I own GitLab CI pipelines for three product teams of about 25 developers. By profiling workflows, parallelizing test jobs, caching dependencies, and separating end-to-end testing into its own stage, I reduced average pipeline time from 38 to 14 minutes and monthly runner costs by about 30%. I also built short-lived merge-request environments using Helm on a shared Kubernetes cluster, with automated cleanup. This required repeatable deployments, automated lifecycle management, and clear interfaces for QA and product users. The ephemeral environments enabled QA and product teams to review features before merge and run end-to-end tests, while I documented the CI system for onboarding and mentored two QA interns.

In a personal three-node k3s homelab, I deploy applications through Argo CD and operate Prometheus, Grafana, and Loki for monitoring and logging; I also use Traefik ingress and cert-manager for SSL/TLS. My Terraform experience is currently through personal infrastructure projects, including provisioning a Hetzner VPS; I have not yet used Terragrunt. I would bring a strong analytical approach, practical experience with Linux, containers, CI/CD, and test environments, and a habit of documenting technical systems clearly. I'm interested in applying that foundation to Corvale's fleet connectivity work. I would be keen to contribute my experience in repeatable CI/CD delivery, Kubernetes-based environments, observability, and technical documentation while growing into broader cloud infrastructure ownership.

Corvale's engineering-led approach and its expectation that teams Lead, Shape, and Own their systems appeal to me. I would welcome the opportunity to discuss how my experience improving infrastructure for product teams could contribute to this engagement. I would bring a practical foundation in CI/CD, Kubernetes-based environments, GitOps, observability, Linux, and technical documentation while continuing to grow toward broader cloud infrastructure ownership.

Thank you for your consideration.

Marta Kowal-Brandt
