Marta Kowal-Brandt

Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I'm a QA Automation Engineer with seven years of experience, including a strong recent focus on CI/CD, test infrastructure and delivery tooling. In my current role, I own GitLab CI pipelines for three product teams and build short-lived test environments using Docker Compose and Helm on a shared Kubernetes cluster.

I've worked on improving the reliability and efficiency of the systems teams depend on. By profiling and restructuring pipelines, I reduced average execution time from 38 to 14 minutes and monthly CI runner costs by about 30%. I also maintain a roughly 900-test pytest and Playwright suite, reducing its flaky-test rate from 7% to below 1%, and built a dashboard that helps teams identify recurring issues. I own the GitLab CI pipelines used by three product teams. I wrote the internal guide to how our CI works, which is used in team onboarding, and the merge-request environments allow QA and product reviewers to assess features before merge.

My hands-on infrastructure experience includes building Helm-based ephemeral environments and operating them through namespace-level access in a shared Kubernetes environment. I also run a personal Linux-based k3s GitOps cluster using Argo CD, Prometheus, Grafana and Loki. In that lab, I also configured cert-manager for TLS and used Prometheus, Grafana and Loki for monitoring. I've used Terraform to provision infrastructure for a small personal Hetzner VPS and am preparing for the CKA exam. I'd bring this practical experience, an analytical approach demonstrated by reducing pipeline time and flaky-test rates, together with practical experience building observable, reliable test environments to Corvale's work connecting vehicle systems with cloud services. I'm particularly interested in the opportunity to contribute to an engineering-led platform while applying my CI/CD and test-infrastructure experience to broader cloud infrastructure engineering, and to collaborate across infrastructure and backend teams.

Thank you for your consideration. I'd welcome the opportunity to discuss how my experience could contribute to the Fleet Connectivity team.
