Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. My background combines seven years in QA automation with hands-on infrastructure work: I own CI pipelines for three product teams and have built Kubernetes-based environments that help teams validate and review changes before they merge.

At Odrava Health Software, I built merge-request environments deployed via Helm from GitLab CI, with PostgreSQL, seeded data, automated end-to-end tests and automatic cleanup. I also reduced average pipeline time from 38 to 14 minutes and lowered flaky-test rates from 7% to below 1%. These projects have given me practical experience improving delivery workflows, maintaining test infrastructure and making systems easier for development teams to use. I have also documented how CI works for onboarding and supported QA and product teams using the environments.

Alongside my production work, I built a three-node k3s homelab deployed through Argo CD, with Prometheus, Grafana and Loki, and used Terraform to provision infrastructure for a small Hetzner VPS. My production Kubernetes work is scoped to namespace-level access and Helm-based test environments; the platform team operates the shared cluster. I am developing my infrastructure skills further through CKA study. I would bring this practical delivery and observability experience to Corvale's work connecting a new train fleet with cloud services, while continuing to grow into broader infrastructure ownership.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience could contribute to the Fleet Connectivity team.

Marta Kowal-Brandt
