Nadia Brennan-Aziz

Dear Hiring Manager,

I am applying for the Cloud Infrastructure / DevOps Contractor role at Corvale Mobility. The opportunity to help shape the cloud infrastructure connecting a new generation of trains with backend services, and take it from design into production, closely matches my experience building and operating AWS platforms for services that need to be reliable at scale.

At Tallybrook, I am technical lead of a five-person platform team operating EKS across three regions. I built an internal developer platform adopted by all 14 product teams, combining Go and Python service templates, Argo CD, and Crossplane-based self-service infrastructure. This reduced the path from a new service to production from around two weeks to under a day. I have also led infrastructure improvements with measurable operational and cost outcomes, including a 38% reduction in EC2 spend through Karpenter and Spot instances.

My earlier role at Brightwater Games gave me hands-on experience with Terraform-managed AWS infrastructure, observability, and launch readiness for game backends serving up to 1.2 million daily active players. I used k6 load testing to identify a connection-pool limit before a launch, and replaced noisy Nagios alerting with Prometheus, Grafana, Alertmanager, and Loki. At Tallybrook, I introduced SLOs and burn-rate alerts with product leadership, reducing on-call pages by about 60% for the services in scope.

I would bring Corvale practical experience in cloud infrastructure design and operation, Terraform, system reliability, and leading technical work with product teams. My AWS experience includes VPC and IAM; I would welcome the opportunity to discuss how this background could contribute to the train-to-cloud platform.

Best wishes,
Nadia Brennan-Aziz
