Dear Corvale Mobility hiring team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity engagement. I bring 10 years of infrastructure experience, including six years operating Kubernetes platforms on AWS, and a strong track record of taking platform improvements from design through production.

At Tallybrook, I am the technical lead of a five-person platform team operating EKS across eight clusters and three regions. I built an internal developer platform using Terraform, Argo CD and Crossplane that all 14 product teams adopted, reducing the time to take a new service to production from about two weeks to under one day. I have also led infrastructure cost and reliability initiatives, including a Karpenter migration that reduced EC2 spend by 38% and an SLO programme that reduced on-call pages by about 60%. These projects required practical system decisions, clear operational standards and collaboration with product teams.

My production experience is in cloud platforms and backend services rather than train connectivity. I would bring relevant experience in AWS infrastructure design and operation, Terraform, Linux, observability and reliability as Corvale develops the cloud systems for its new train fleet. At Brightwater Games, I operated services supporting up to 1.2 million daily active players and used load testing and capacity planning to prepare for high-demand launches.

I would welcome the opportunity to discuss how my platform and SRE experience could support Corvale's fleet connectivity work, from infrastructure foundations through to reliable production services.

Best wishes,
Nadia Brennan-Aziz
