NADIA BRENNAN-AZIZ

Senior Platform / Site Reliability Engineer
nadia.brennanaziz@example.com | +44 7700 900909 | github.com/nba-sre-example

PROFESSIONAL SUMMARY

Senior platform and site reliability engineer with 10 years of infrastructure experience, including six years running Kubernetes platforms on AWS. Experienced in designing, building and operating cloud infrastructure, maintaining Terraform-based environments, and creating reliable, observable platforms that make it easier for product teams to deploy and operate services. Technical lead of a five-person platform team, with a record of improving delivery speed, reliability and infrastructure cost.

CORE SKILLS

Cloud infrastructure: AWS (EKS, EC2, VPC, IAM, RDS, S3, SQS, Route 53, CloudFront), Kubernetes, Linux
Infrastructure as code and automation: Terraform, Atlantis, Crossplane, Puppet, Bash, Python, Go
Platform engineering: Argo CD, Helm, Kustomize, GitHub Actions, internal developer platforms, service templates
Reliability and observability: Prometheus, Grafana, Loki, Alertmanager, OpenTelemetry, SLOs, error budgets, incident management
Performance and operations: k6, capacity planning, on-call operations

PROFESSIONAL EXPERIENCE

Senior Platform Engineer | Tallybrook Ltd (B2B accounting SaaS) | Apr 2022–Present

- Technical lead of a five-person platform team operating an AWS EKS platform across eight clusters and three regions, supporting approximately 350 services.
- Built an internal developer platform with Go and Python service templates, Argo CD GitOps and Crossplane self-service for RDS, SQS and S3; adopted by all 14 product teams and reduced new-service production time from about two weeks to under one day.
- Led the migration from managed node groups to Karpenter, using spot instances for stateless workloads; reduced EC2 spend by 38% (about £410,000 per year).
- Introduced SLOs, burn-rate alerts and error-budget policies for the 20 most critical services, working with product leadership; reduced on-call pages by about 60%.
- Serve in the incident commander rotation and established the incident and post-mortem process.

Site Reliability Engineer | Brightwater Games | Jan 2019–Mar 2022

- Operated AWS infrastructure for game backends serving titles with up to 1.2 million daily active players, using EC2, ECS and EKS.
- Managed AWS infrastructure as code with approximately 40 Terraform modules and Atlantis pull-request plan/apply workflows.
- Replaced noisy Nagios alerting with a Prometheus, Grafana, Alertmanager and Loki observability stack.
- Load-tested a game launch with k6 simulations of 300,000 concurrent players, identifying and fixing a connection-pool limit before launch; also led launch capacity planning.

SELECTED PROJECT

Kubernetes preview-namespace cleanup controller | Open-source side project | 2024

- Built a Go controller using controller-runtime to delete expired preview namespaces; the project has approximately 120 GitHub stars.

EDUCATION

BSc Computer Science | University of the North Moors | 2016

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) | 2021; renewed 2024
AWS Certified Solutions Architect – Professional | 2023

ADDITIONAL

Speaker, UK DevOps meetup (2024): “SLOs that product managers care about”
Mentored three engineers transitioning from backend engineering into SRE
Languages: English (native), Urdu (conversational)
