Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor role. In my current role at Odrava Health Software, I own GitLab CI pipelines and merge-request environments used by three product teams, supporting the delivery and testing of services through reliable, repeatable infrastructure workflows. I'm looking to build on this experience in a platform and infrastructure engineering role, and Corvale's work connecting a new train fleet with cloud services makes this opportunity particularly compelling.

I've improved CI pipelines across three teams, reducing average run time from 38 to 14 minutes and monthly runner costs by about 30%. I designed and delivered short-lived application and PostgreSQL environments for each merge request, with seeded data, Helm-based deployment to a shared Kubernetes cluster, end-to-end test execution and automatic cleanup after merge or 48 hours of inactivity. These projects required profiling systems, proposing and coordinating changes across three product teams, and bringing developers and QA stakeholders along through clearer CI documentation and visibility into flaky tests. I wrote Odrava's internal guide to how CI works, which is used in onboarding, and mentored two QA interns.

My hands-on infrastructure engineering experience includes Linux, GitLab CI, Docker, Helm-based Kubernetes deployments, namespace-level operation of shared environments, and infrastructure-as-code practice with Terraform. Outside work, I built a three-node k3s homelab with GitOps deployments, monitoring, ingress and TLS certificate management, and provisioned a small Hetzner VPS using Terraform. I have also used AWS EC2 and S3 at a fundamentals level through personal free-tier projects. This has given me a practical foundation in infrastructure-as-code, automation, observability and test infrastructure, while my Terraform experience to date has been through personal projects.

Corvale's engineering-led approach and emphasis on teams owning systems and solving problems collaboratively resonate with how I've approached improving shared CI and test environments. I'd welcome the opportunity to discuss how my experience could support the Fleet Connectivity team as it shapes reliable, observable infrastructure for the new fleet.

Thank you for your consideration.

Marta Kowal-Brandt
