Dear Verdane Care team,

I am writing to apply for the Full-Stack Engineer role on your Patient Experience team. I am a Computing graduate with First Class Honours and hands-on experience building React and TypeScript applications, accessible interfaces, and a Node.js/Express API backed by PostgreSQL. Verdane Care's focus on putting patients first and making healthcare feel simpler and more human strongly appeals to me.

Accessibility has been a consistent focus in my work. During my Software Development Internship at Harbourline Media, I fixed accessibility issues across more than 20 components on its React news site and built a reusable, keyboard- and screen-reader-friendly image gallery, documenting it in Storybook. For my final-year project, Tidewatch, I built an accessible React and TypeScript app with a Node.js/Express API and PostgreSQL, and tested it with NVDA and VoiceOver. The project achieved a Lighthouse accessibility score of 100.

I have also written unit tests with Jest and React Testing Library, and built a Next.js booking site for a local yoga studio. These projects have given me practical experience across frontend and backend development, while reinforcing the value of thoughtful, user-focused design. I would welcome the opportunity to contribute to patient-facing features and continue learning how to handle health information responsibly.

Thank you for considering my application. I would be glad to discuss how my experience could contribute to Verdane Care's Patient Experience team. My portfolio is available at `aiyana-bt.example.com`.

Yours sincerely,
Aiyana Brooks-Tan
