Dear Verdane Care hiring team,

I am applying for the Full-Stack Engineer position focused on Patient Experience. I am a Computing graduate with First Class Honours, and my experience combines accessible React and TypeScript interfaces with project work using Node.js, Express, and PostgreSQL.

Accessibility has been a consistent focus in my work. During my internship at Harbourline Media, I fixed audit findings across more than 20 components, including keyboard navigation, colour contrast, and ARIA labels, and built a keyboard- and screen-reader-friendly gallery. For my Tidewatch final-year project, I tested the app with NVDA and VoiceOver and achieved a Lighthouse accessibility score of 100. Verdane Care's commitment to WCAG 2.2 AA and its focus on patient-facing features make this role especially appealing to me.

Tidewatch also gave me practical experience developing a Node.js/Express API that caches public weather and tide data and using PostgreSQL for user favourites. I have written unit tests with Jest and React Testing Library, documented a component with Storybook, and built a Next.js booking website for a local yoga studio. These experiences give me a relevant foundation for contributing across the frontend and supporting backend work in your team.

I would welcome the opportunity to discuss how my accessibility-focused frontend experience and project work could contribute to Verdane Care's Patient Experience squad. Thank you for considering my application.

Yours sincerely,

Aiyana Brooks-Tan
