Dear Verdane Care hiring team,

I am applying for the Full-Stack Engineer role in the Patient Experience squad. Verdane Care's focus on accessible patient-facing booking and follow-up tools is a strong match for the work I have pursued in frontend development, particularly through building accessible web experiences for people who need clear, usable information.

For my final-year project, Tidewatch, I built a React and TypeScript app for sea swimmers, supported by a Node.js/Express API and PostgreSQL database. I tested the interface with NVDA and VoiceOver and achieved a Lighthouse accessibility score of 100. During my internship at Harbourline Media, I also addressed accessibility audit findings across more than 20 React components, built a keyboard- and screen-reader-friendly gallery documented in Storybook, and wrote unit tests with Jest and React Testing Library.

Alongside this experience, I have built a Next.js booking website for a yoga studio and developed frontend features in team projects. I would bring practical React, TypeScript, Node.js, PostgreSQL, accessibility, and testing experience, along with an interest in contributing to Verdane Care's patient experience and learning within a team building privacy-conscious care software.

Thank you for considering my application. I would welcome the opportunity to discuss how my project and development experience could contribute to Verdane Care.

Yours sincerely,
Aiyana Brooks-Tan
