**Application: Full-Stack Engineer (TypeScript / React) - Patient Experience**

Dear Verdane Care hiring team,

Your Patient Experience role connects two areas of my work: accessible React interfaces and booking experiences. I am a First Class Honours Computing graduate with professional frontend experience and full-stack project experience using TypeScript, Node.js, Express and PostgreSQL. Verdane Care's focus on making appointment booking and follow-up simpler for patients is a strong match for the usability and accessibility work I can bring to your team.

During my internship at Harbourline Media, I resolved accessibility audit findings across more than 20 React components, addressing keyboard navigation, colour contrast and ARIA labels. I also built a keyboard- and screen-reader-friendly image gallery, documented it in Storybook and wrote unit tests with Jest and React Testing Library. My interest in accessibility began when a friend who uses a screen reader showed me the barriers she encountered online. That experience gives particular meaning to your commitment to WCAG 2.2 AA.

For my final-year project, Tidewatch, I built a React and TypeScript application backed by a Node.js/Express API and PostgreSQL. The API cached public weather and tide data, while the database stored user favourites. I tested the application with NVDA and VoiceOver and achieved a Lighthouse accessibility score of 100. My backend experience comes from projects; my professional work has focused on frontend development, including a freelance Next.js yoga studio website with a timetable and emailed booking requests.

I would bring practical accessibility work, reusable component development and automated unit testing to your squad. Helping approximately 30 first-year students in web development labs also gave me experience supporting others as they learned. I would welcome the opportunity to discuss how this foundation could contribute to your patient-facing features. My portfolio and GitHub links are included above. Thank you for considering my application.

Yours sincerely,
Aiyana Brooks-Tan
