Dear Tessel Cargo Software hiring team,

I am applying for the Backend Engineer (Python) role. I have seven years of professional backend experience, primarily building and operating Java and Spring services, and I am interested in moving toward a Python-focused stack. My experience building Java backend services closely matches the comparable-language requirement, and I am motivated to work mainly in Python.

In my current role, I develop and maintain seven microservices and designed a versioned REST API for broker quoting, now used by 12 partners for around 400,000 requests per month. I also improved the quote endpoint's p99 latency from 1.8 seconds to 450 milliseconds by adding Redis caching and resolving JPA query issues. These projects have given me practical experience designing REST APIs, tuning queries in PostgreSQL-backed services, and improving the performance and reliability of production systems.

I have also built Kafka producers and consumers for claims workflows, implementing a transactional outbox and idempotency keys that reduced duplicate claim records from around 40 per week to zero over the following quarter. I deploy Dockerized services to Kubernetes on AWS EKS through Helm and Jenkins CI/CD pipelines, participate in a monthly on-call rota, and have written integration tests with Testcontainers. I also investigated a significant Kafka lag incident and contributed a well-regarded incident write-up, experience that reinforced the importance of clear technical communication and dependable services. I would bring this experience in event-driven systems, automated testing, delivery and production support to Tessel's shipment-tracking platform.

Tessel's emphasis on dependable services and ownership of what engineers run strongly appeals to me; my current role includes a regular on-call rota, production incident investigation, and incident documentation. I would welcome the opportunity to discuss how my backend experience could contribute to the Routing & Tracking team.

Best regards,

Daniel Okafor-Reyes
