Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. My experience is rooted in QA automation, and in recent years I've focused on the infrastructure that helps product teams build, test, and deliver reliably: CI/CD pipelines, short-lived test environments, and observability.

At Odrava Health Software, I own GitLab CI pipelines for three product teams and built merge-request environments deployed with Helm to a shared Kubernetes cluster. By parallelising test jobs, adding dependency caching, and separating end-to-end tests into their own stage, I reduced average pipeline time from 38 to 14 minutes and monthly CI runner costs by about 30%. I've also used PostgreSQL and Grafana to make flaky-test trends visible to teams, and wrote the internal CI guide used in onboarding. These projects have developed my habit of making infrastructure practical for the teams that rely on it, while keeping reliability and maintainability in view.

I'm building further infrastructure experience through a personal three-node k3s cluster managed with Argo CD, with Prometheus, Grafana and Loki for monitoring, and a small Hetzner VPS provisioned with Terraform. At Odrava, my Kubernetes work is at namespace level: I create Helm-based test environments on a shared cluster rather than operate the cluster itself. My cloud exposure so far is personal learning with Hetzner and AWS EC2 and S3 basics. I would bring that hands-on foundation, along with my experience coordinating technical work across product teams, while continuing to grow into broader cloud infrastructure responsibilities.

Corvale's work connecting vehicle systems with cloud services is an appealing opportunity to apply my automation and reliability experience to a new infrastructure challenge. I'd welcome the chance to discuss how my background could contribute to the Fleet Connectivity team.

Thank you for your time.

Marta Kowal-Brandt
