Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role supporting Fleet Connectivity. With seven years in QA automation and recent hands-on responsibility for CI/CD pipelines, Kubernetes-based test environments and build tooling, I have developed a practical infrastructure focus and am looking to move into DevOps and platform engineering full time. Corvale's engineering-led approach and emphasis on end-to-end ownership particularly appeal to me.

At Odrava Health, I own GitLab CI pipelines supporting three product teams and approximately 25 developers. I improved average pipeline time from 38 to 14 minutes and reduced monthly runner costs by about 30% by parallelising jobs, caching dependencies and restructuring end-to-end testing. I also implemented short-lived merge-request environments using Helm on a shared Kubernetes cluster, with PostgreSQL and seeded data, automated cleanup, and end-to-end tests running against each environment. This work enabled QA and product teams to review features before merge while I owned the pipeline and environment automation supporting three product teams.

Alongside my professional work, I built a three-node k3s homelab with applications deployed through Argo CD, monitoring with Prometheus, Grafana and Loki, and Traefik ingress and TLS certificate management configured with cert-manager. I have also provisioned infrastructure for a small Hetzner VPS using Terraform. These projects have given me practical experience with infrastructure as code, observability, networking and certificate management, complementing my professional experience with Linux, Docker, Kubernetes and CI/CD. I would bring an analytical, collaborative approach to shaping and operating infrastructure and to working with QA and product teams on practical delivery decisions.

I would welcome the opportunity to discuss how my experience in test infrastructure and hands-on experience in CI/CD, Kubernetes test environments, Terraform-based infrastructure, observability, and TLS certificate management could contribute to Corvale's train-to-cloud platform. Thank you for your consideration.

Kind regards,
Marta Kowal-Brandt
