Dear Verdane Care Hiring Team,

I am applying for the Full-Stack Engineer role on the Patient Experience team. I have hands-on experience building web applications with React and TypeScript, and I am especially interested in making digital services accessible and straightforward for the people who rely on them.

During my Software Development Internship at Harbourline Media, I worked on its React news site, resolving accessibility audit issues across more than 20 components, including keyboard navigation, colour contrast and ARIA labels. I also built a reusable, keyboard- and screen-reader-friendly image gallery, documented it with Storybook, and wrote unit tests using Jest and React Testing Library.

My final-year project, Tidewatch, gave me experience building across the stack: I developed a React and TypeScript frontend, a Node.js/Express API, and PostgreSQL storage for user favourites. I tested the app with NVDA and VoiceOver, and it achieved a Lighthouse accessibility score of 100. The project received a First Class grade. I have also built a booking website with Next.js and Tailwind CSS.

Verdane Care's focus on patient experience, accessibility and "Privacy by default" appeals to me. I would value the opportunity to contribute my frontend and project experience to software that helps patients manage appointments and follow-up care. My portfolio is available at aiyana-bt.example.com.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience could contribute to the Patient Experience team.

Yours sincerely,
Aiyana Brooks-Tan
